

**GAS INNOVATIONS** exports carbon monoxide, hydrocarbons, and anhydrous hydrogen chloride.....

In the past two months Gas Innovations packaged carbon monoxide in bulk ISO Modules and into cylinders for shipment to South America and the Far East.

**GAS INNOVATIONS**, with its customs broker, worked to distribute carbon monoxide in bulk and lease bulk packages, ISO Modules for economical shipment of the product. Successful lease agreements were negotiated for risk mitigation of the expensive modules, export documents were completed with customs brokers, loading and shipping arrangements made, and details resolved for the return of the modules for refilling.

Safety concerns were reviewed with the shipping company, including a review with the ship's captain. Familiarization was the main issue with the review and the MSDS being the key document reviewed. Phone numbers were reviewed for international calling. Plans have now been made for the return of the ISO Modules for refilling.

**GAS INNOVATION'S** distributor brought this opportunity for an innovative solution.

When export opportunities arise, call on **GAS INNOVATIONS** for review of the sale and supply of the containers. The experience of the team at Gas Innovations will work to help grow your business with its products, packages and services.
