FOR IMMEDIATE RELEASE

MEETING THE CHALLENGE Gas Innovations Expands its storage capacity and dual scale filling capability to meet the Hydrocarbon Refrigerant demand....

Houston, TX – (June 7, 2018) Gas Innovations expands capacity by adding additional cryogenic tanks and additional truck scales. Gas Innovations now fills liquified petroleum gases (LPG) ISO and cryogenic ISO's simultaneously.

Gas Innovations supplies turn key logistics of hydrocarbon supply to projects worldwide. These projects include packaging, analytical quality control, complex routing and project management.

This expansion allows Gas Innovations to meet the large delivery demands of LNG startups, petrochemical feed stocks, diluents and other campaigns or petrochemical demands.

About Gas Innovations

Gas Innovations was founded in 2002 with the goal of providing industrial gas producers and distributors a dependable, independent wholesale supply partner. Since its founding, the company has grown to become a world wide supplier of high purity hydrocarbons, refrigerant gases and specialty gases. Gas Innovations is located at the mouth of the Houston Ship Channel, La Porte, TX. Visit us online at www.gasinnovations.com.

Gas Innovations' increased storage capacity allows the company to supply Ethylene, LNG & Ethane.

Dual Scale ISO Filling simultaneously
